

Myobrace - Pre-Orthodontics for today's children

MOST parents would agree their children are less than enthusiastic about taking a seat in the dentist's chair. It can be frightening, uncomfortable and regardless of whether the patient visits a small practice or boutique dental spa the treatment experience is essentially the same. Unfortunately for the majority of 21st century children who have crooked teeth, orthodontic treatment has largely remained the same for much of the last 100 years. For decades, straightening their teeth has involved invasive treatments and relapse is all but assured. However, contemporary research has shed light on the underlying causes of crooked teeth and well-informed parents have forced the agenda, generating momentum towards non-invasive, preventive paediatric orthodontic treatment options.

The good news for today's children and parents is there are highly developed paediatric orthodontic treatment systems available right now. Rather than use mechanical forces to align crooked teeth, The Myobrace System™ is focused entirely on addressing the poor myofunctional (lips, tongue and cheeks) habits as well as the incorrect breathing that causes crooked teeth. By encouraging the patient to play an active role in their own treatment and promoting growth and development, outstanding and stable results can be achieved without relying on braces, extractions or surgery. The Myobrace System™ combines patient and parent education, exercises to correct breathing and strengthen facial muscles, habit correction and an intuitive removable oral appliance range to offer parents and patients a more natural treatment.

A major factor in the success of The Myobrace System™ is the philosophy that parents must be empowered to make educated decisions regarding their child's orthodontic treatment. To facilitate this, comprehensive resources have been made available to help the general public gain a better understanding and clearer insight into the reasons for and benefits of early or preventive orthodontic intervention. Prior to committing to the treatment, parents are encouraged to visit the myobrace.com website where information regarding how treatment works and the advantages of Myobrace® compared to treatment solely with traditional alternatives is readily available and only a click away. To achieve outstanding results, The Myobrace System™ relies on patient and parent compliance and effective education is the first step towards attaining this.

In addition to facilitating a parent's ability to make an informed decision by providing necessary resources, The Myobrace System™ includes several features intended to make it as accessible as possible. Once a parent clearly understands the benefits of early intervention and pre-orthodontic treatment they can make the informed decision to pursue their child's treatment with The Myobrace System™. There are then several avenues available to continue, including options to attend an information session, complete the Myobrace® self-assessment or book a free consultation at a nearby Myobrace Pre-Orthodontic Center®.

Straight teeth the natural way

Will your child need orthodontic braces, extractions or even surgery?

Did you know, treatment with braces generally only focuses on the symptoms of crooked teeth, not the causes?

Myobrace Pre-Orthodontic Center® provides treatment options that address the underlying causes of orthodontic problems and may unlock your child's healthy growth and development, without the need for braces.

Before your kids get braces contact us today for your free consultation.*

Suitable for children from 5 to 15.
